Nidec Machine Tool to Exhibit Its Gear Machines at AMB2022 in Germany to Target the European Market

Nidec Machine Tool Corporation announced today that it will be exhibiting at AMB 2022 (International Exhibition for Metal Working) for the first time. In the event to be held at Messepiazza in Stuttgart, Germany from September 13 – 17, Nidec’s booth, with its distinctive green incorporate color, will introduce the Nidec machine tools.

Nidec Machine Tool will demonstrate its high-level technical capabilities as Japan’s top-share comprehensive manufacturer of gear machine tools. Based on the ongoing increase in the use of electric vehicles (EVs) around the world, Nidec will use video images and panels to demonstrate the high-efficiency, high speed hobbing machine, the GE15HS. In addition, the world’s only generating internal gear grinding machine, the ZI20A-G will be featured in video demonstration. Both machines are designed for the manufacturing of EV transmission gears, and will support the increasing production in the future.

Booth information: Halle 5, aisle C, Booth 61

Both of these products were designed for mass production, and to achieve the highest accuracy and productivity in the industry. Nidec Machine Tool, as comprehensive gear machine manufacturer, will introduce a rich lineup of its products, including the wide variety of efficient gear cutting tools. Nidec Machine Tool is poised to increase the presence of Nidec’s gear machines in the European market as it provides technically advanced and reliable solutions to manufacturers.
