

MightyShield μ

Exquisite coating exclusively designed for Super-fine pitch cutters

Characteristics

An ultra-thin coating that tends not to affect the tooth profile errors of the workpiece, developed specifically for high-precision, small-pitch tools, of which hardness is HV4,000.

The thickness of the coating is formed as 2 μ or less, and the variation in the thickness from the tip to the root of the tooth is kept as 1 μ or less.

Disclaimer : It may be not possible to apply depends on the certain cutter shape.
